increase leadtime.

U-VALUE
AS LOW AS
0.9 W/m²K

Double glazing
as standard,
providing excellent
insulation values.

POSITIVE DRAINAGE

The specifically designed profile contours maximise natural drainage and prevent moisture build-up. This makes them extremely long-lasting for maximum performance with every window.

Designed to Passivhaus recommendations, the thermal dam reduces heat transfer.

Internal structures provide exceptional rigidity whilst minimising the need for steel reinforcing.

Size-optimised chambers break up mini convection currents locking in warm air.

ALSO
AVAILABLE AS
BOW AND BAY
WINDOWS

ENTIRELY RECYCLABLE

Our uPVC profiles are extremely robust and durable - making them 100% recyclable, for a truly environmentally friendly product.
